NASA CURRENT AND PENDING (OTHER) SUPPORT FORM

Identifying Information

Name: Goodrich, Colton, Lynn

Persistent Identifier (PID): ORCID 0009-0006-5237-2836

Position Title: Doctoral Candidate, Geosensing Systems Engineering & Sciences

Organization and Location: University of Houston, Houston, TX, USA

a. Proposals and Active Projects

Entry 1 — Graduate Assistantship

Title: Graduate assistantship — monthly stipend and tuition waiver

Status of Support: Current

Award Number (if available):

Source of Support: University of Houston, Cullen College of Engineering, NCALM

Primary Place of Performance: University of Houston, Houston, TX, USA

Start Date: 08/2025   Expected End Date: 08/2029

Total Anticipated Amount: Stipend $2,601.67/month (~$31,220/year, 12-month appointment) + tuition waiver ~$3,852/semester (~$7,700/year; TX-resident Engineering-PhD rate, 9 SCH, AY2027; mandatory fees additional)

Person-Months Per Year: 12

Overall Objectives: Graduate assistantship supporting the FI's doctoral study, training, and dissertation research in geosensing/remote sensing; not tied to a single external project.

Statement of Potential Overlap: No scientific overlap with the pending FINESST proposal (Entry 2). If FINESST is awarded, 6 person-months/year now covered by this assistantship would be reallocated to FINESST for the proposed research; the assistantship adjusts accordingly, so the FI's total committed effort stays at 12 person-months/year with no double compensation.

Entry 2 — This FINESST proposal

Title: Detection to Attribution: Linking Two Decades of Antarctic Stream-Channel Change to Climate Drivers Utilizing Terrain Data

Status of Support: Pending

Award Number (if available): N/A (under review)

Source of Support: National Aeronautics and Space Administration (NASA) — FINESST, ROSES-2025 Appendix F.5

Primary Place of Performance: University of Houston, Houston, TX, USA

Start Date: 01/2027   End Date: 08/2029 (2 years, 8 months)

Total Anticipated Amount: up to $133,000 ($50,000 per budget year, final year partial)

Person-Months Per Year: 6

Overall Objectives: Attribute two decades of measured stream-channel and stream-corridor geomorphic change in the McMurdo Dry Valleys to climate drivers, using multi-epoch lidar and satellite-DEM differencing with per-pixel calibrated uncertainty.

Statement of Potential Overlap: This is the proposal under consideration. No scientific overlap with current support; any budgetary/effort overlap with the assistantship is resolved by reallocation so total committed effort remains ≤ 12 person-months/year.

Certification

I certify that the information provided is current, accurate, and complete. This includes, but is not limited to, information related to current, pending, and other support (both foreign and domestic) as defined in 42 U.S.C. §6605.

I also certify that, at the time of submission, I am not a party to a malign foreign talent recruitment program.

Misrepresentations and/or omissions may be subject to prosecution and liability pursuant to, but not limited to, 18 U.S.C. §§287, 1001, 1031 and 31 U.S.C. §§3729-3733 and 3802.
